

Website SEO Cadence

IELTS AI Tutor by IELTSGRADER - activities on ieltsgrader.com only

Canonical host: <https://www.ieltsgrader.com> (apex redirects to www). Use the www property in Google Search Console.

Scope

This guide covers pages, blog, meta, internal links, sitemap, schema, and GSC for www.ieltsgrader.com only. Off-site promotion (Reddit, LinkedIn, Quora, YouTube, etc.) lives in SEO/social-media/.

North star

- Indexable content on winning keyword clusters
- Strong titles/meta for CTR
- Internal links from blog to tool converters
- Healthy technical crawl (sitemap, indexing, CWV)
- Clear free-eval / signup CTA on every P0 page

1. Full URL inventory

Never optimize (robots Disallow)

/dashboard, /report, /performance, /learning, /settings, /admin, /subscription, /upgrade, /analysis-ready

Effort priority

- P0: /, /ielts-essay-checker, /ielts-ai-tutor, /blog, top GSC click pages
- P1: Task 1/2 checkers, band score, mock test, /grade-my-essay
- P2: Other blog posts, /pricing, legal (accuracy only)

2. Create vs improve (continuous)

Two streams always running: CREATE new indexable URLs (mostly blog) and IMPROVE existing URLs so they rank and convert better.

SEO impact

- New blog posts: new queries, long-tail, more links into essay checker
- Scored samples: high-intent long-tail + conversion
- Title/meta rewrites: higher SERP CTR on pages that already get impressions
- Deeper tool FAQs: relevance for head terms (essay checker, AI tutor)
- Internal links blog -> tools: structure + converter support
- Sitemap + indexing: faster discovery of new/changed URLs
- Refresh aging posts: protect rankings; prune thin after 90d

3. How to create a new blog post

- 1. Pick topic from KEYWORDS.md + GSC (impressions without a strong page)
 - Type: Guide (900-1500w), Scored sample (essay + notes), Comparison
 - 2. Slug: lowercase-hyphens, keyword, no dates. Title: keyword + benefit | IELTS AI Tutor
 - 3. Write: H1 + keyword in first 100 words; teach concretely; no banned claims
 - 4. Required: Try it yourself -> /ielts-essay-checker; Related reading links
 - 5. validate_frontmatter.py -> generate_sitemap.py -> deploy -> GSC Request indexing
- File path: ielts-grader-app/src/content/blog/{slug}.md (template: SEO/blog/_TEMPLATE.md)

4. What to create constantly

- Priority: Task 2 samples -> Task 1/GT samples -> band-improvement guides -> trust/comparison
- Steady volume: >=1 new published blog URL per week
- When capacity allows: 1-2 scored samples per week
- New tool/landing URLs: rare - only for clear P0 keyword with no page
- Never create speaking/reading/leaked-test content

5. What to improve constantly

Tool + home pages (P0/P1)

- Weekly Tue: title/meta on low-CTR pages (impressions > 100, CTR < 2%)
- Monthly: FAQ + schema on one tool page; cross-links to siblings + 1 blog
- Always: soft CTA above fold; no banned claims

Existing blog posts

- Rewrite titles when CTR low; refresh high-impression posts monthly
- Add missing tool/related links on Thu; expand thin posts stuck at positions 8-20
- Prune/merge zero-impression posts after 90 days

Map to weekdays

- Mon: measure + pick next create and improve targets

- Tue: IMPROVE titles/meta | Wed: CREATE publish | Thu: IMPROVE links/FAQ | Fri: ship sitemap/index

6. Daily activities

~30-60 minutes when content work is active. No social posting.

- GSC Page indexing: check new or 'Discovered - currently not indexed' P0 URLs; Request indexing if needed.
- Draft progress: write/edit toward publish (blog/_TEMPLATE.md, BRANDING.md).
- Live spot-check one URL: title, meta, H1, primary CTA to free eval.
- Note one internal-link opportunity on a P0/P1 page (INTERNAL_LINKING.md).

7. Weekly activities (Mon-Fri)

- Mon: GSC scorecard (impressions, clicks, CTR, position, indexed). Export Performance; optional gsc_summarize.py.
- Low-CTR candidates: impressions > 100 and CTR < 2%.
- Tue: Title/meta rewrite on 1-2 low-CTR P0/P1 pages; ship.
 - Wed: Publish or deepen one blog post (target >=1/week; 1-2 samples/week when capacity allows).
 - Thu: Internal linking (new post <-> hubs/tools); strengthen 2 cluster links; optional FAQ/schema on one tool page.
 - Fri: Regen sitemap; deploy; Request indexing for new/changed URLs; close site-only scorecard actions.

Ops commands

```
python3 SEO/scripts/validate_frontmatter.py
python3 SEO/scripts/generate_sitemap.py
Sitemap: https://www.ieltsgrader.com/sitemap.xml
```

8. Monthly activities

- Cluster review: which clusters gained; which tool converts best.
- Plan 2 new posts (or major refreshes) in the winning cluster.
- Refresh aging high-impression posts (examples, CTAs, year).
- Prune/merge/noindex: zero-impression posts after 90 days (document in TRACKER.md).
- Technical health: Coverage, PageSpeed/CWV on / and /ielts-essay-checker; sitemap + prerender in prod.
- Schema/FAQ expansion on one P0 tool page.
- Bing Webmaster: sitemap parity with GSC.

9. Post-publish checklist

Run for every new or updated indexable URL:

- Frontmatter valid (status: published, slug, title, description)
- Internal links to ≥ 1 tool hub + related posts
- Soft CTA to free eval / essay checker (no banned claims)
- generate_sitemap.py + deploy
- GSC URL Inspection -> Request indexing
- Add URL to weekly scorecard 'New content published'

10. Site levers (what maximizing SEO means here)

- CREATE: more indexable content on winning clusters
- IMPROVE: better titles/meta, depth, FAQs on existing URLs
- Stronger internal links from blog to converters
- Healthy technical crawl
- Clear conversion path on every P0 page

Promoting through other platforms is out of scope for this PDF. Site quality is what Google ranks and what off-site traffic lands on.

11. Weekly scorecard tear-off (site-only)

Week of: _____

- Impressions / clicks / CTR / avg position / indexed pages
- ☐ GSC (+ Bing if due) checked
- ☐ New content CREATED/published: _____
- ☐ Existing URLs IMPROVED (titles/meta/links): _____
- ☐ Internal links added to new posts
- ☐ Sitemap regenerated + indexing requested

Low-CTR rewrite list: impressions > 100, CTR < 2%. Full tables: SEO/MEASUREMENT.md. Editable source: SEO/WEBSITE_SEO_CADENCE.md.

Remember

Create every week. Improve every week. Work P0 URLs first. Measure in GSC every Monday. Never optimize Disallow routes.
